EngineDescription

- Source code was made in Unity3D
- Cross platform (Googleplay, iTunes)
- 100tested levels with different targets
- Gameplay - combine 3 or more items the same color
- Included IAP's
- Map

Jelly Garden Match 3 Engine will help you to create beautiful and juicy game in Match 3 style (with many visual and sounds effect).

The engine very comfortable for understanding and studying. Creating new levels will be for you like a game. You need just open the engine and set desired game objects at desired locations playing field. The size of the playing field is configured in the editor also.

All you need is a little time and imagination everything else will make **Jelly Garden Match 3 Engine**.

How to play

Combine 3 or more objects the same color for WIN!

SET UP

Use Unity3D 5.3 or high. You can **download** it from this link

[DownloadUnityFree](http://unity3d.com/get-unity/download?ref=personal)(<http://unity3d.com/get-unity/download?ref=personal>)

How to install:

1. Download the project archive.
2. Unpack the archive.
3. Open Unity3D and click “Open other”.

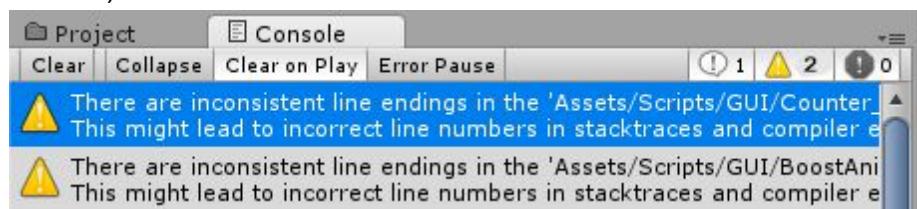

4. Choose the unpacked folder of the project.

Имя	Дата изменения	Тип	Размер

Important information!!!

NOTE:Ignore all warnings and notifications (like yellow sign and white bubble in console). Press clear.

It's **NOT errors**. It does not affect to work of the game.

Attention!

We are not responsible for the work of free plugins and third-party IDE. For any questions, please contact an official developer. The quality of our templates for games is not depends from the quality of plugins and IDE of other developers!

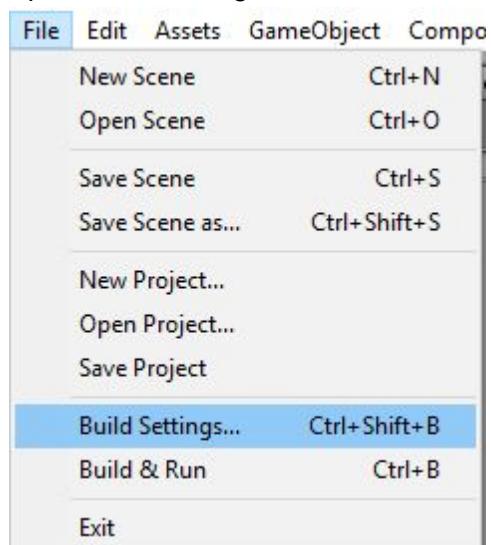

Also, we unable to educate every of our buyers work with these plug-ins and third-party IDE. If you have questions, you can ask us or to google.

Usually, we add them from your big requests and completely free! If you do not like those free plugins, you can integrate your plugins.

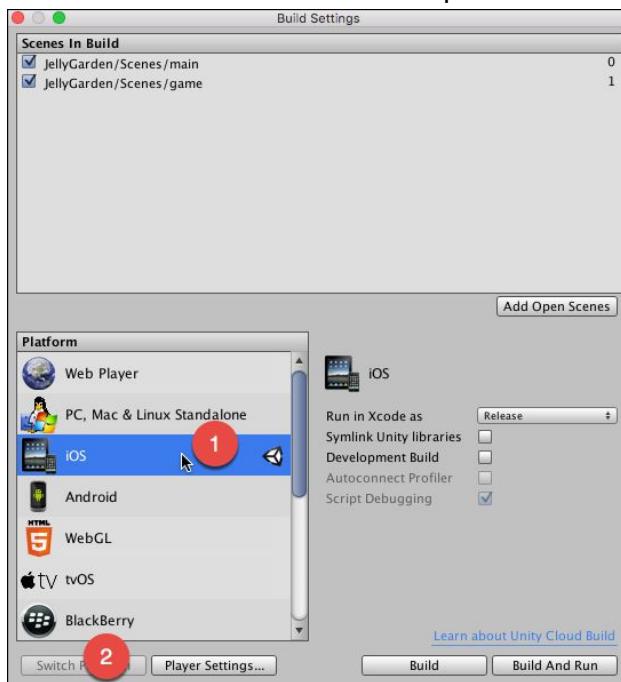

We are always happy to help you find out in the project, but we can not be responsible in your experience in working with plugins and third-party IDE. So please objectively evaluate the project and the work done by us. Thank you!

Android / iOS Building

1. Open Build Settings...

2. Select Android or iOS and Switch platform

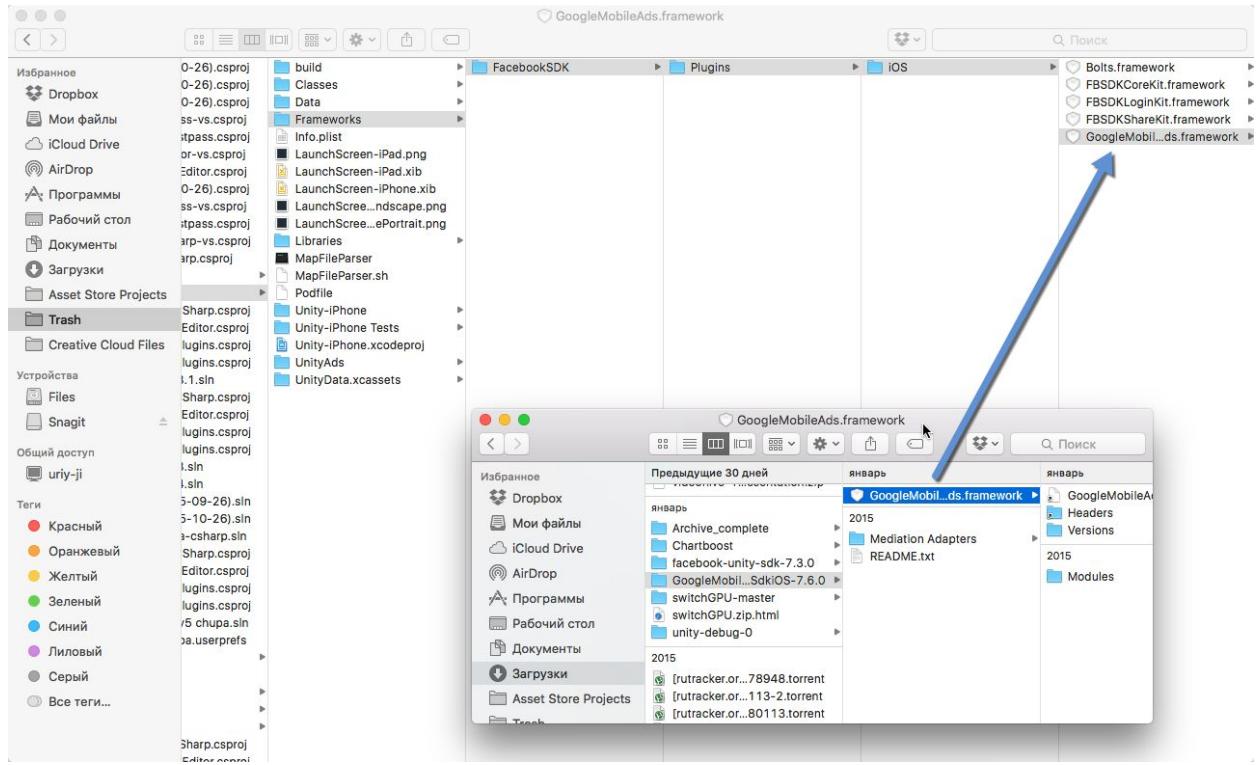

3. Then Build and Run

Next only for iOS:

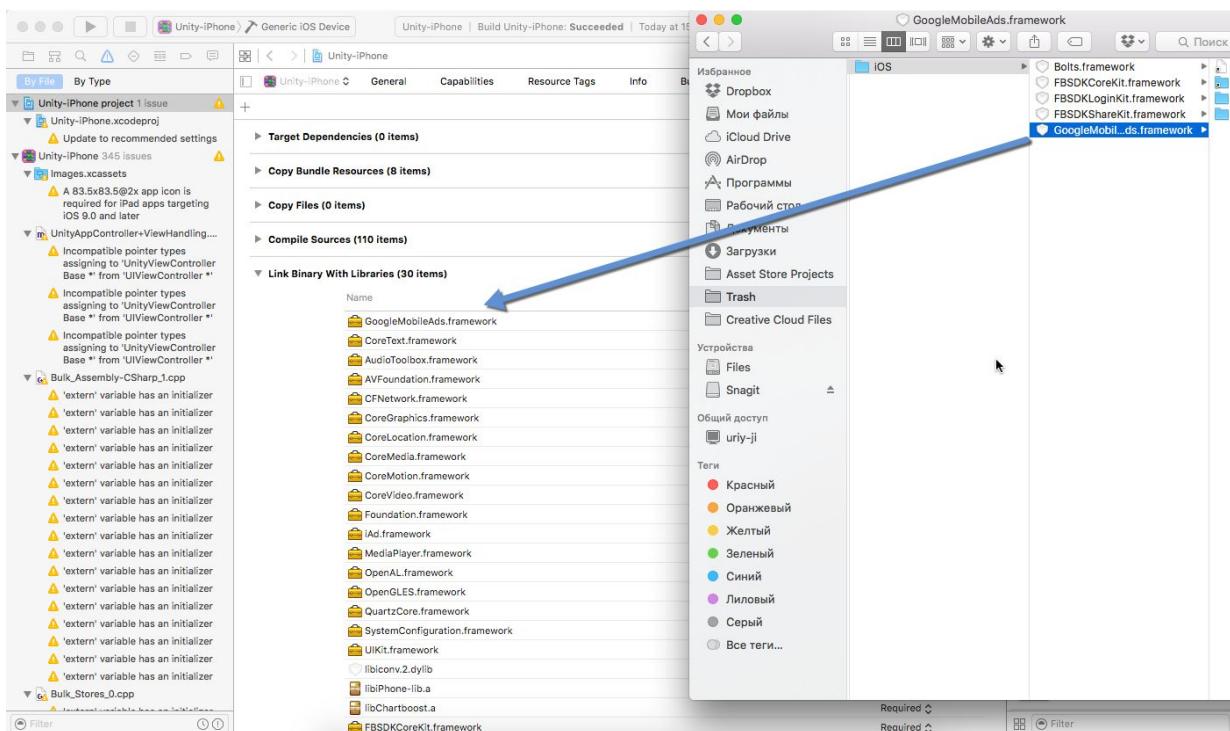

4. After building open the result project in xCode.

5. Download Google Mobile Ads SDK <https://developers.google.com/admob/ios/download>

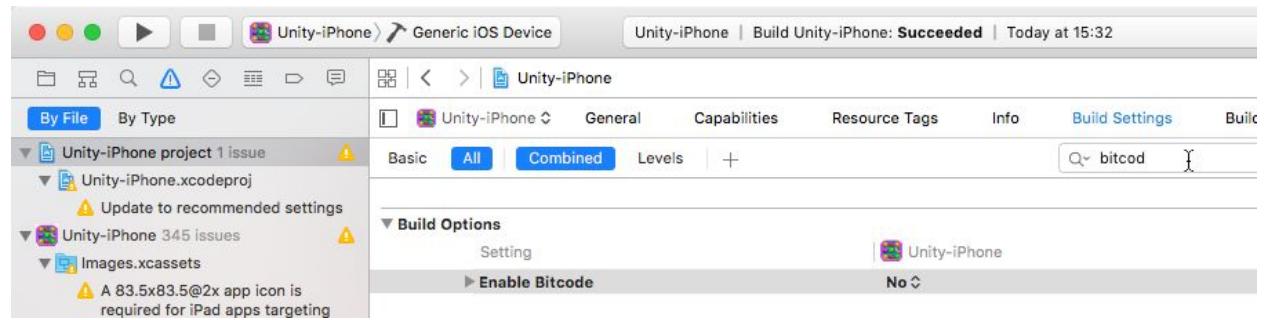

6. Copy GoogleMobileAdsSDK.framework to your xCode project/Frameworks

7. Drag GoogleMobileAdsSDK.framework from your xCode project to Build Phases->Link Binary With Library

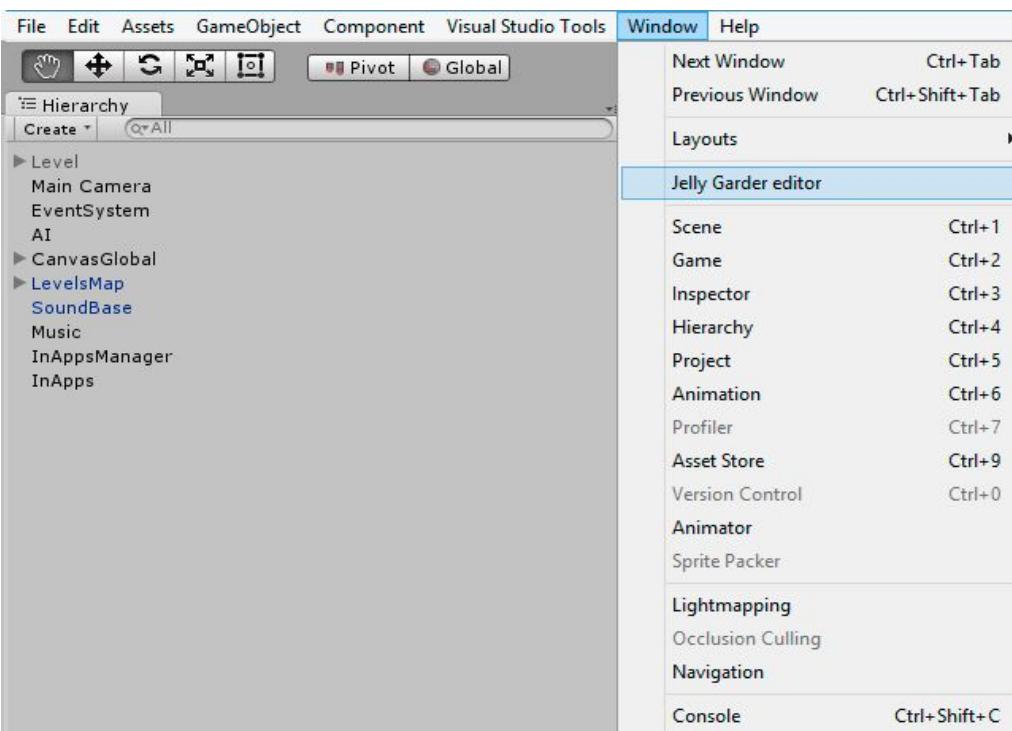

8. Disable bitcode

9. Then select your device and press Build.

How to open Level Maker Editor Important information!!!

For open LevelMakerEditor you need go to **Window** and choose **Jelly Garden editor**.
See screenshot:

Opens a window with the **LevelMakerEditor**. Just drag it in a comfortable place for you:

Game Features

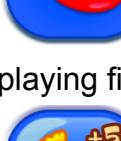

-  - Horizontal stripe item destroys all game objects horizontally on its way
-  - Vertical stripe item destroys all game objects vertically on its way
-  - Package destroys all game objects around (9 items) on its way
-  - Multicolor bomb destroys all items the same color which has been combined.

Mix of Features

-  +  OR  +  = destroys all objects horizontally and vertically on its way
-  +  = destroying 3 rows of game objects horizontally and vertically
-  +  = Big Boom destroys around more items than just Package (13 items)
-  +  = If combining multicolor bomb with stripe game items it transforms all items the same color in striped on game field
-  +  = If combining multicolor bomb with package it transforms all items the same color in packages on game field.

-  = If combining multicolor bomb with multicolor it destroying all objects on game field.

Game Boosters

-  Give +5 extra moves
-  Give +30 extra seconds
-  Destroying 1 item on game field
-  Remove 1 item on game field
-  Change the colors around the selected item.
-  Purchased before the start of the level. Multicolor bomb on the playing field at the start of the game
-  Purchased before the start of the level. +5 stripes items on the playing field at the start of the game
-  Purchased before the start of the level. +5 packages items on the playing field at the start of the game

Map

Map have 10 ready levels for demonstration. You need to change it for your unique level design. Total on map is 100 tested levels. Use it or create your levels. It's very EASY :) And play in it via map. Just press the PLAY button.

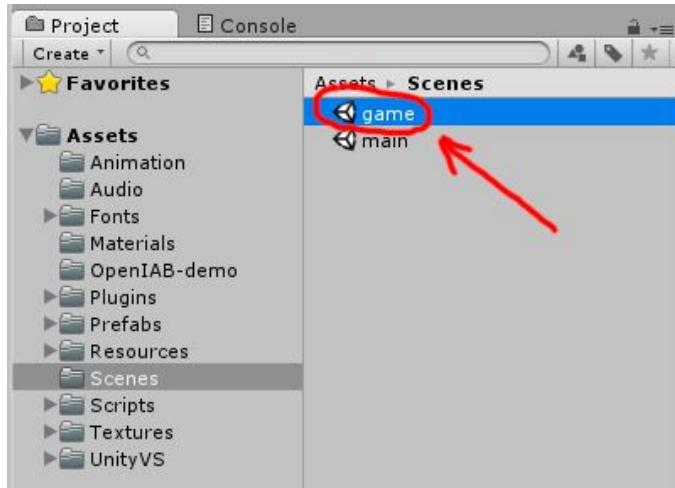

Tiled backgrounds allow you to create theme of the map in any order! (**Remember:** if you changing map theme you need to change backgrounds for your levels!)

You can create more levels if you wish!

How to edit map

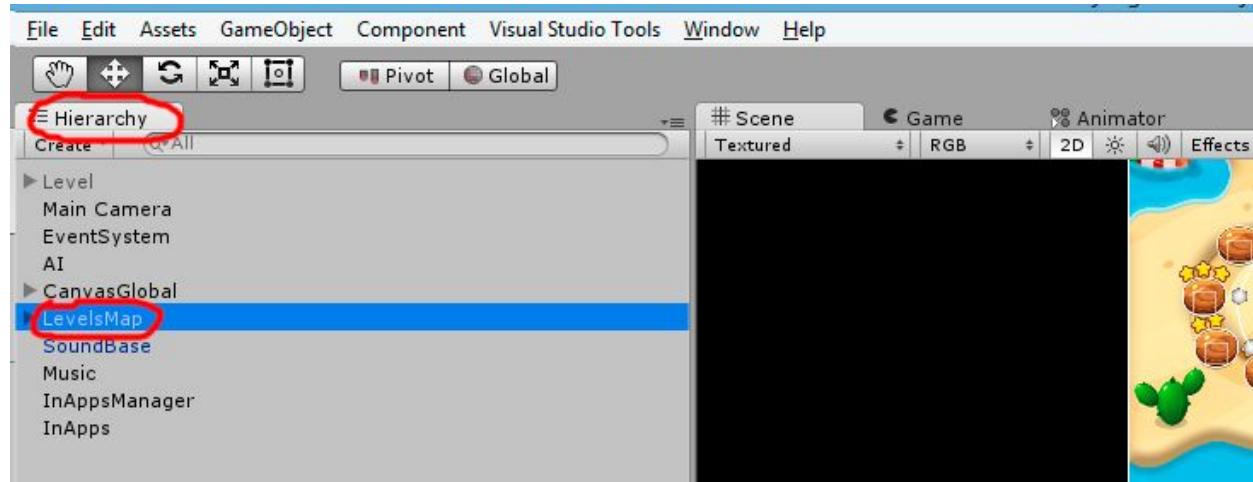

1. Open game scene

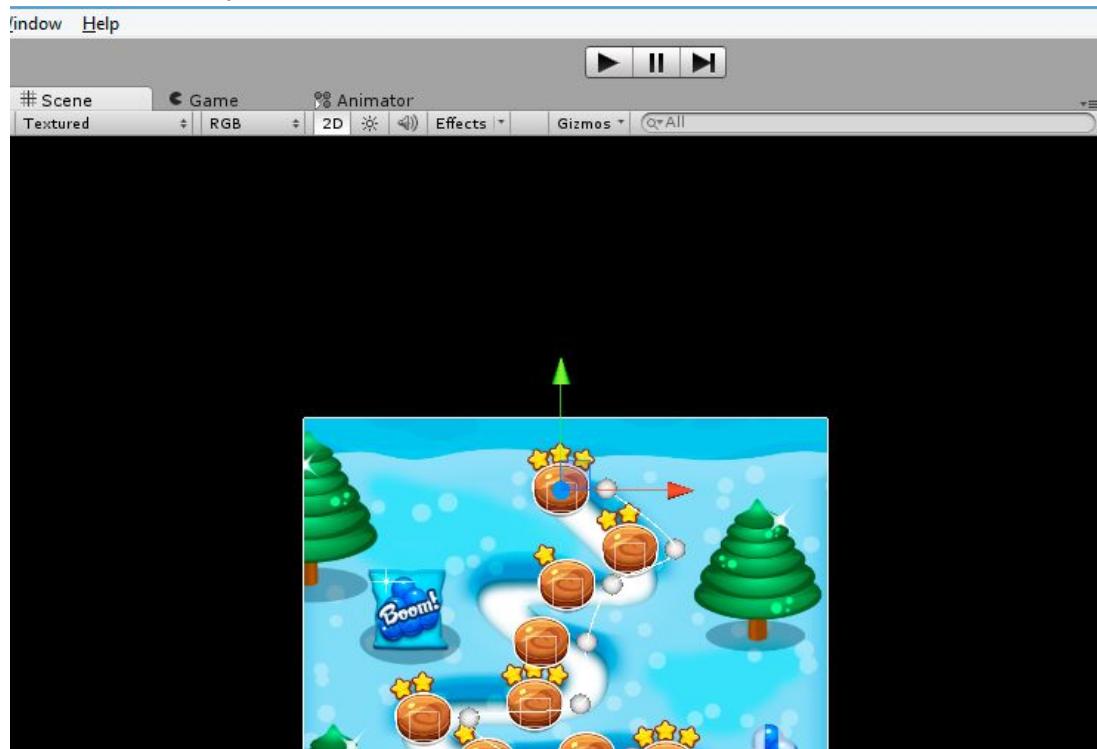

2. Select Scene view

3. Double click on LevelsMap object in Hierarchy to see it in center.

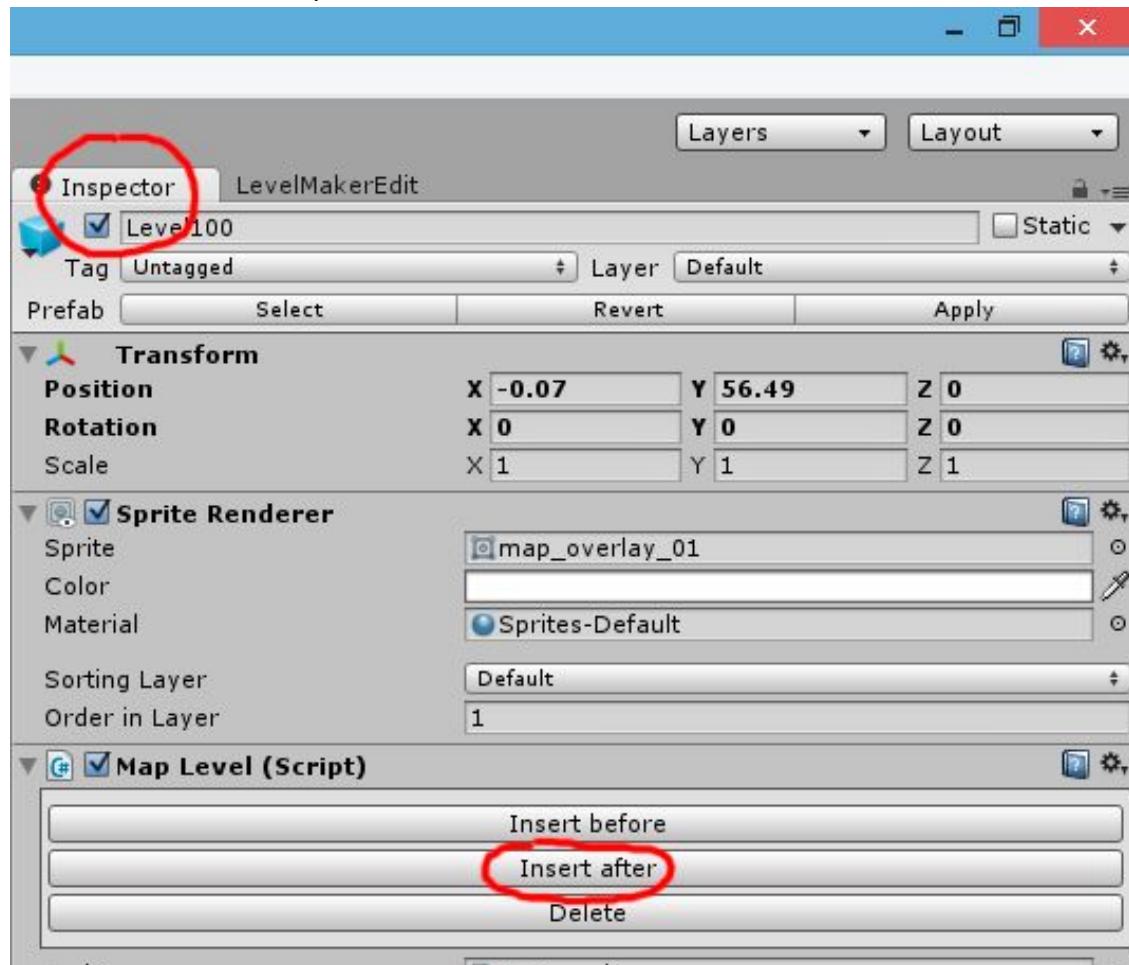

4. Select level icon you need on the map

5. Drag it where you need.
6. If you need to **add new level** select the last icon on map. Now it is 100th level

7. Click "Insert after" in inspector window

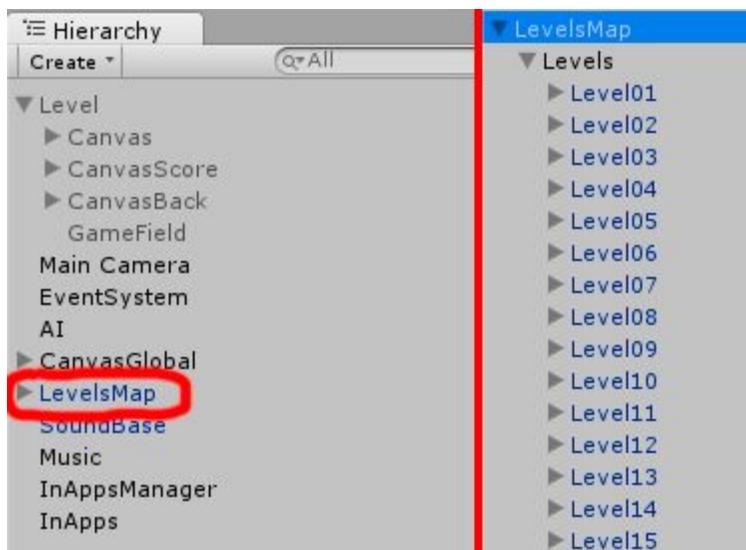

8. Drag it where you need.
9. Also you have "delete" and "insert before" buttons there

Remember: If you want to create new levels (**more than 100levels**), you need to create new levels in LevelMakerEditor and then to create the new object on map.

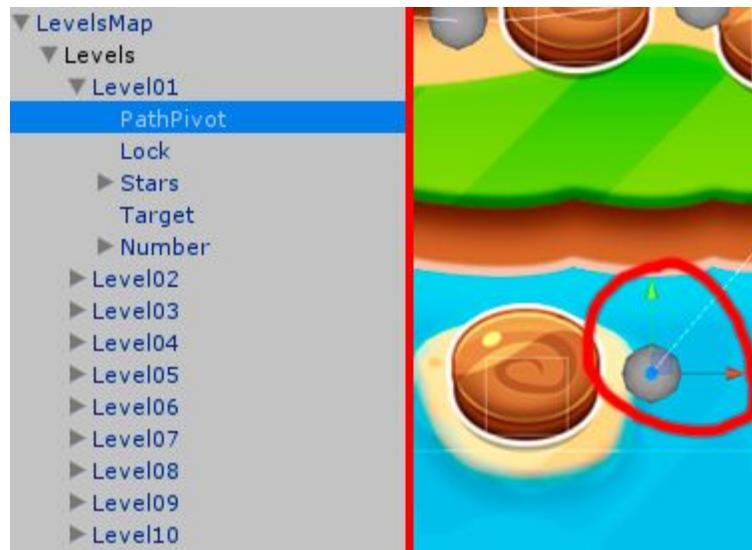

10. How to edit **Player Icon** position:

The grey points in map editor is Player Icon position. You can change it, just look in **Hierarchy** and select Levels map, expand it:

After this, expand any "level...", you see the "PathPivot". It is position for player icon.

Just drag it in necessary place.

Game Targets

The engine have 5 targets:

- - **Get the Star** (destroy the items the same colors and get the required number of score and get the star)

- - **Get Ingredients** and (destroy all the objects hindering drop ingredients down)

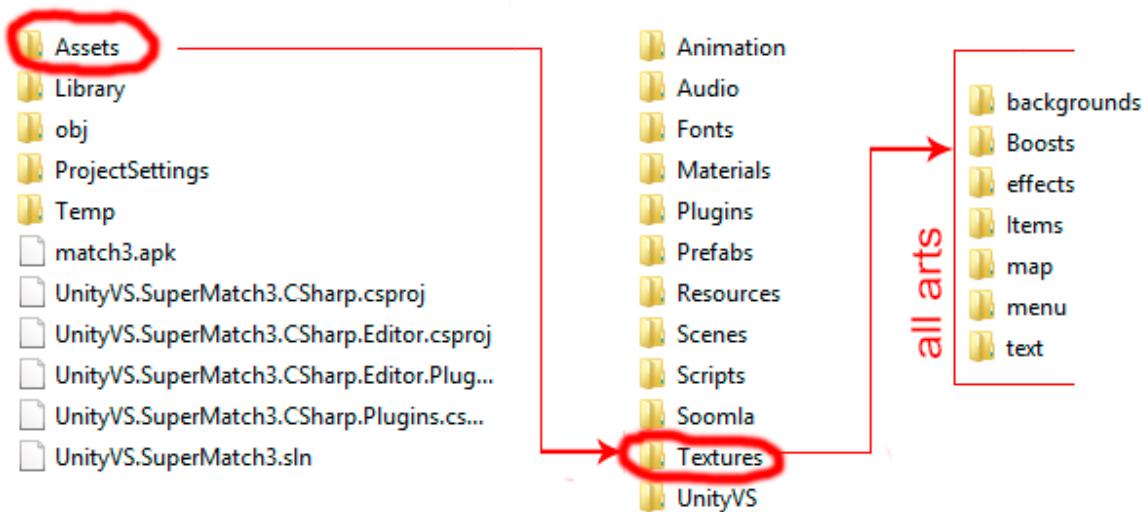

- - **Get the star for a few minutes** (destroy the items the same colors and get the required number of score and get the star for a few minutes)

- - **Destroy all sugar** on game field

- - Gather the required **number of items** this color

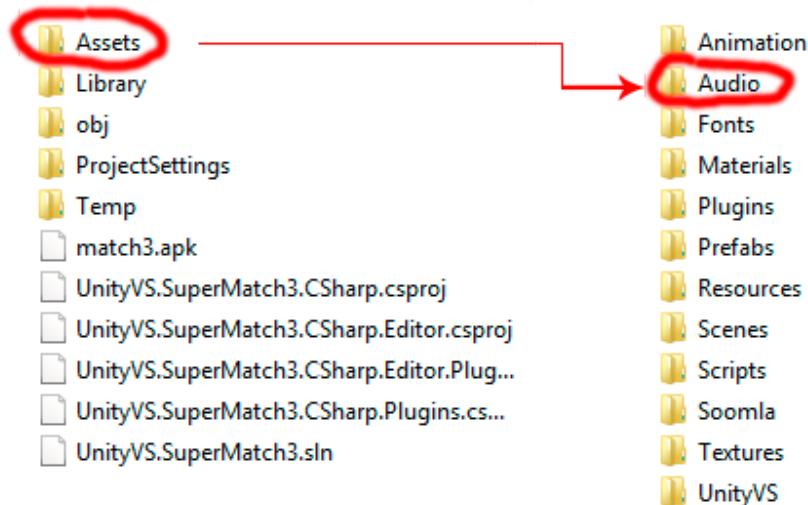

How to Reskin

1 - Almost all graphics located in the folder **Assets/Textures**. You need just **replace** your art in this folders, keep the same name in **PNG** format:

Audio

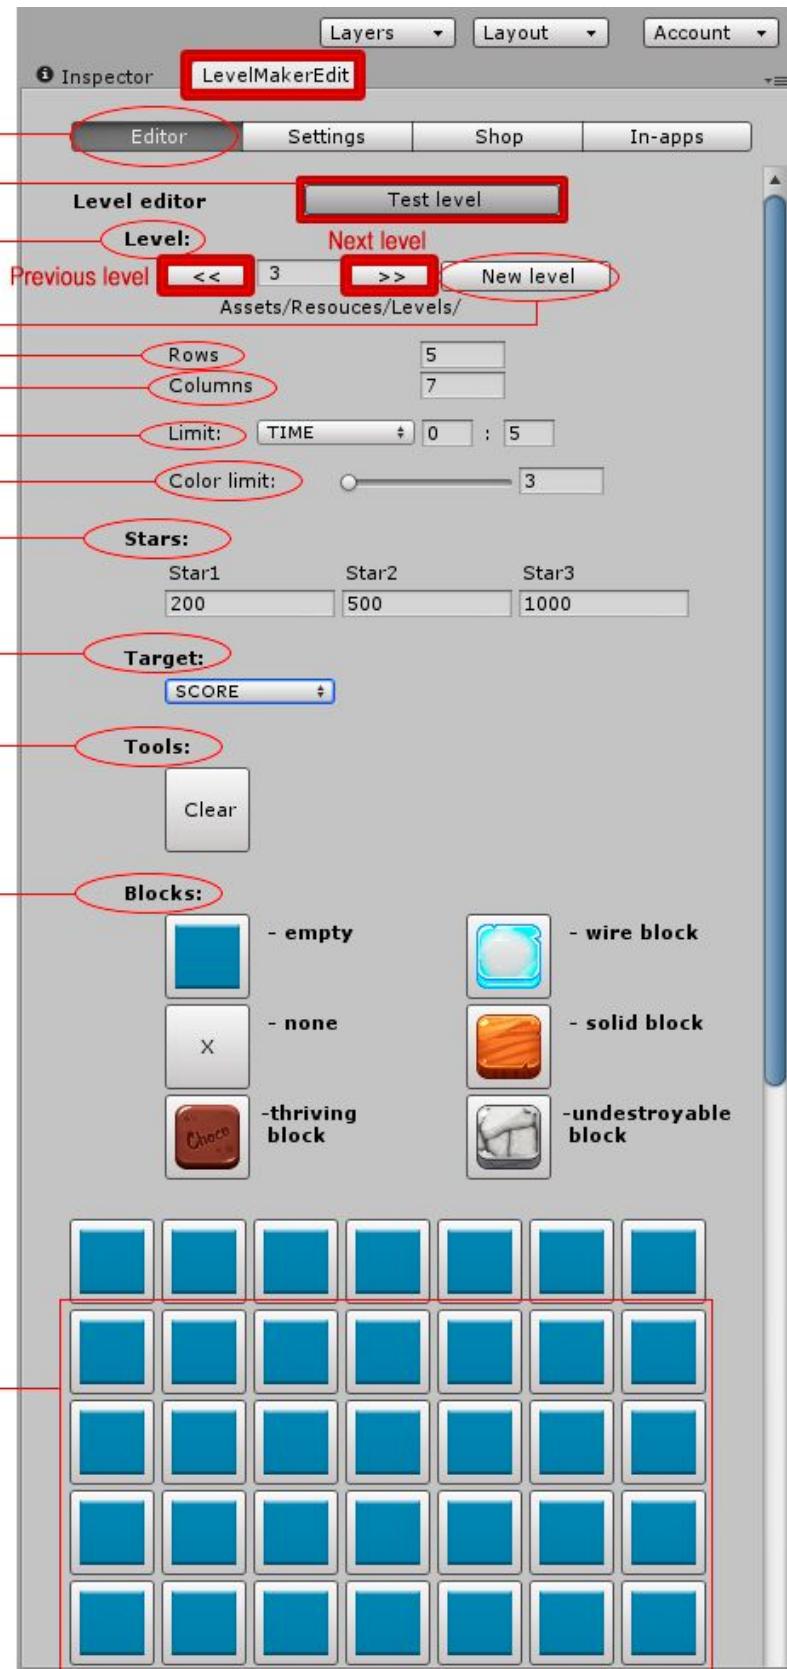

Audio files located in the folder **Assets / Audio**. You need just **replace** your music and sounds in this folder, keep the same name in **MP3** format:

Level Maker Editor

Use Level Maker Editor for create your unique level design.

ATTENTION!Please, use **scene** --->Assets / Scenes / game when you creating and editing your levels!

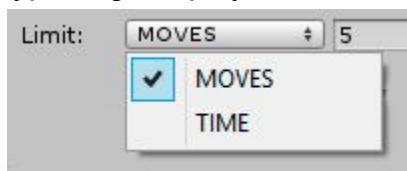

1. **Editor** section - here you can create your levels.

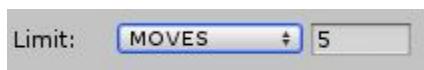

2. **Levels** - enter number of level for creating or editing.
To switch between the levels, use the buttons "Previous level" or "Next level" or enter a number of levels by hand.

ATTENTION! You don't need to worry about saving data. All actions are automatically saved!

3. **Test level** - Use this button after creating a level if you want to test.
4. **New level** - to create a new level press the "New level" button. The level is automatically created. You just need to create a level design.
5. **Rows** - number of the rows on game field. **Maximum11**.
6. **Columns** - number of the columns on game field. **Maximum9**.
7. **Limit** - you need choose the gameplay for your level. The Engine included two type of game play - **Moves** or **Time**. The drop-down menu select the type of gameplay:

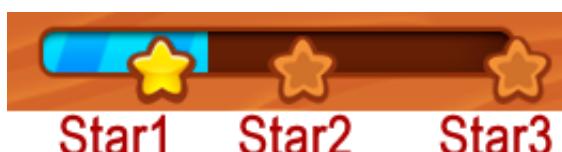

*If you choose **MOVES**, you need to enter a limit on the number of **moves** for this level

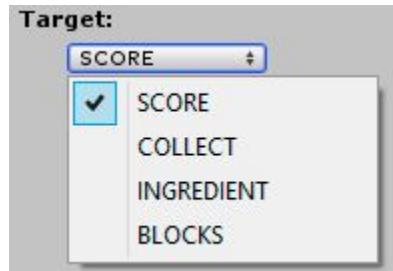

*If you choose **TIME**, you need to enter a limit on the number of **minutes and seconds** for this level

8. **Color limit** - number of color on current level (**minimum 3 - maximum 6**)
9. **Stars** - number of scores for each stars (**Star1 - minimum scores for win**)

10. **Target** - you need to choose the target for your level. This editor included 4 versions of targets. (Look section **Game targets**, page 2. You can see 5 icons, but and have the same target - get one star, changed just gameplay).

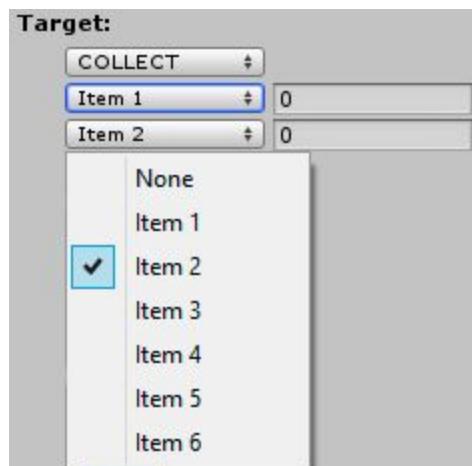

***Score** - get necessary number of scores and get one star

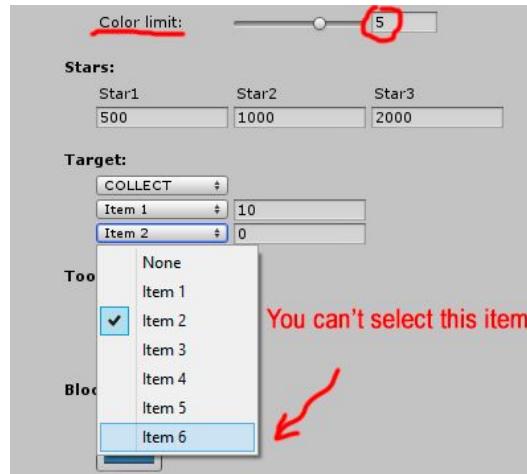

***Collect** - get necessary number of items.

Items is game objects like jelly (in this engine)

You need to choose the two different game items (jelly) for collecting, and enter the required number of each item.

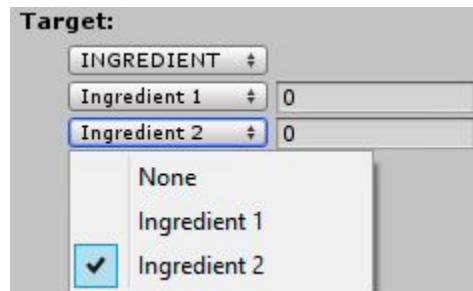

NOTE: If you select the limit for color of items, you can't choose some items. For example, if you select to limit 5 items, you can't choose "item 6" in settings.

***INGREDIENT**- get necessary number of ingredients.

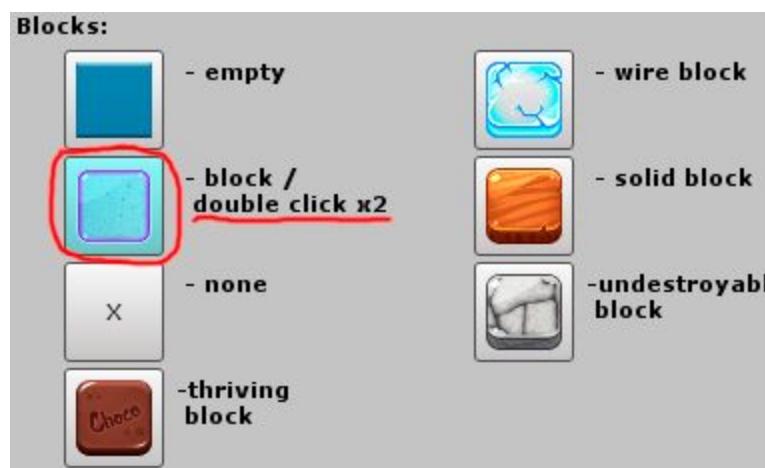

Items is game objects like juice  and spoon  (in this engine)

You need to choose the one or two ingredients for collecting, and enter the required number of each item.

***BLOCKS** - when you choose this target, additional block are available. This block is target. Player need to destroy all the same block for win.

ATTENTION! Double-clicking creates a double layer of this block when you creating or editing your level.

Empty - use for clearing space.

None - use for cut a slot.

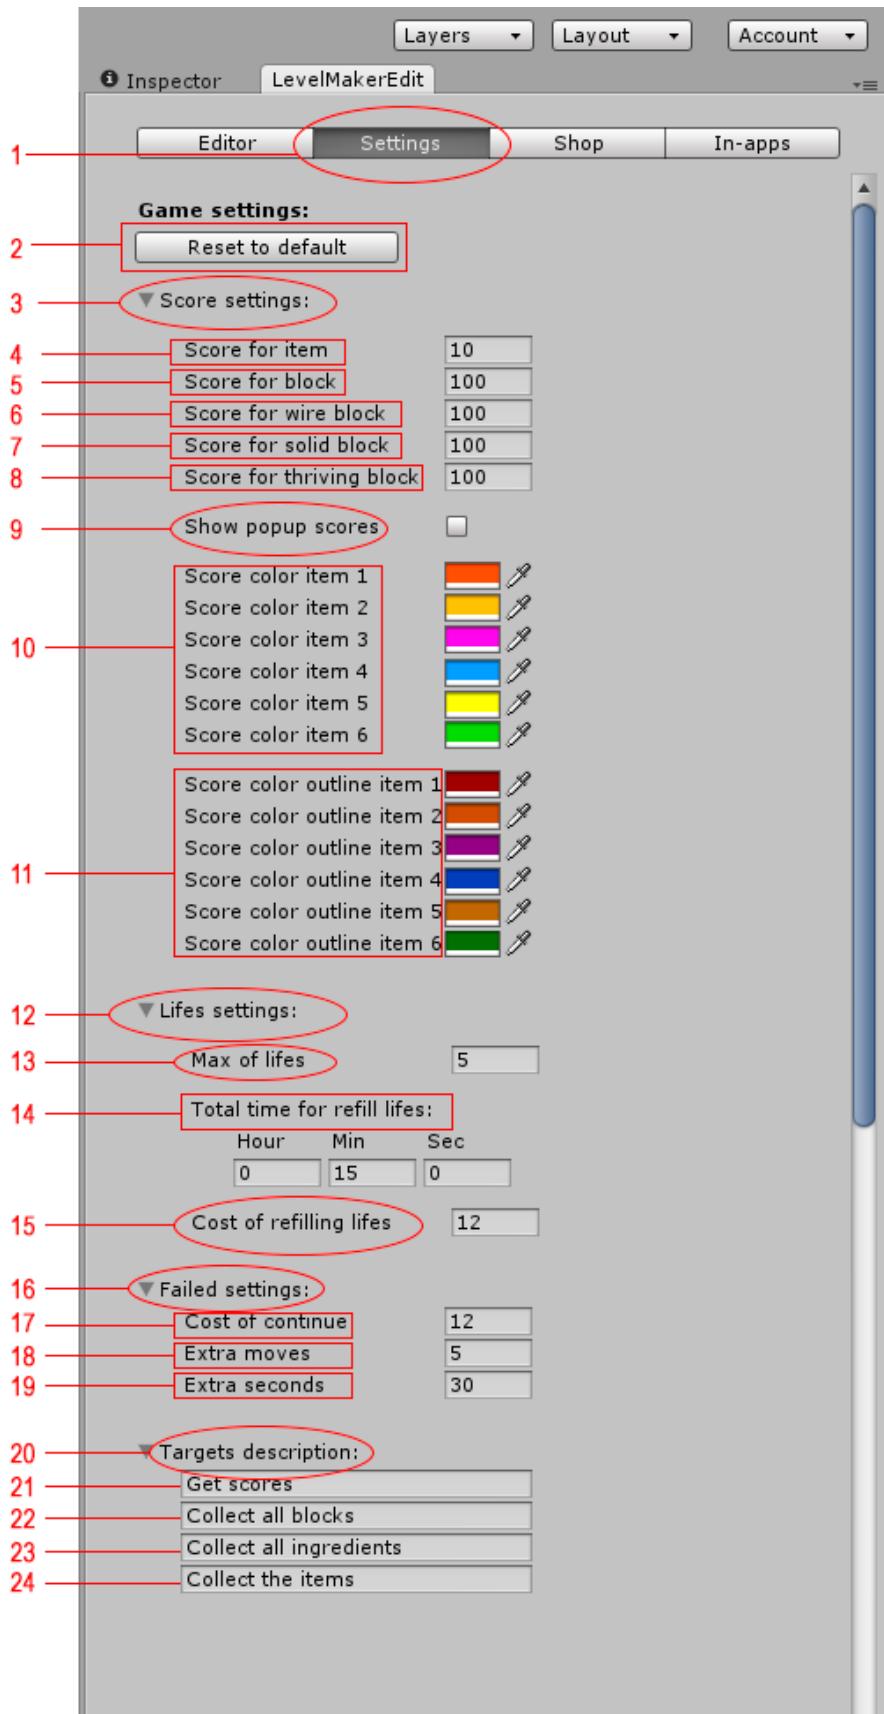

11. **Tools** - Press button "Clear" to reset your settings.
12. **Blocks** - it is obstacles. Click on icon any block and click on game field.
13. **Game field** - place for actions in game. You need click on wisher block than click on game field, and block appear in a specified place.

Game obstacles

-  and  Block and Double block - (game target) - need to destroy all the same items on game field. For cancel Double block just click again.
P.S. If you want to put block under Wire Block, first just place Block and cover it Wire Block.
-  Solid block can be destroyed if near were destroyed game items.
-  Undestroyable block.
-  Wire Block not allow to move a game items.
-  Thriving block absorbs one game item per turn, if no chocolate block has not been destroyed.

Settings

ATTENTION!Please, use **scene** --->Assets / Scenes / **game.unity**when setting up the game!
